324

GRESSIONAL RECORD — HOUSE

Stockpiling of strategic and critical materials: A new long-term stockpile level has been established to provide an additional measure of security over and above the minimum goals. Procurement of the additional minerals will generally be limited to instances where purchases at favorable prices will serve both to meet the long-term stockpile objectives and to maintain essential domestic production, as in the case of lead and zinc

in the past 6 months. Preliminary reviews of 50 minerals indicate that the new policy may eventually increase the inventories of materials by 3.3 billion dollars above the 6.5 billion dollars of minimum objectives. By the end of the fiscal year 1956, about 5.1 billion dollars of materials within the minimum objectives, and an additional 1.2 billion dollars toward the long-term objectives will be in inventory, compared with June 1954 levels of 3.8 billion dollars and 700 million dollars, respectively. In considerable measure, this progress is made possible under the Defense Production Act, discussed in the commerce and manpower section of this message.

Mutual security program: Military assistance and direct forces support help other free nations to train and equip the modern armed forces which are necessary for our security as well as their own. Such assistance is an integral part of our own national security program for it helps to create, in crucial areas of the free world, essential military strength which bolsters our own forces. Because our allies generally provide the major portion of the costs of maintaining the forces, this strength is being created at a relatively low cost to the United States

Compares with new obligational authority of 4,725 million dollars in 1954 and 2,781 million dollars in 1955.

The military assistance and direct forces support programs are two parts of an integrated mutual security program which in its entirety is designed to provide other nations with the margin of outside assistance which they need to develop and maintain their political, military, and economic strength, which s in our interest. Other parts of this program are discussed in the international affairs and finance section of this message. I shall submit to the Congress

proposals for necessary changes in the Mutual Security Act. These will include my specific requests for authorization of appropriations for the fiscal year 1956. Total expenditures for mutual security are estimated at 4.7 billion dollars in the fiscal year 1956, including the provisions for a program in Asia. Recommended new authority to incur obligations is 3.5 billion dollars.

Organization for mutual security operations: The organizational arrangements to carry on the mutual security program beyond the present fiscal year are now under careful study and I shall in the near future present to the Congress my recommendations regarding them.

Military assistance: The mutual military assistance proposed for the fiscal year 1956 will further help our allies to complete equipping and training the equivalent of more than 180 divisions, 551 combat vessels, 278 air squadrons, and related supporting units. Our assistance goes only for forces determined to be essential by our Joint Chiefs of Staff. It provides only the critical margin of training and equipment which the countries cannot provide for themselves. During the past 5 years we have delivered over 6,000 airplanes, almost 900 naval vessels of all types, 36,000 tanks and combat vehicles, nearly 200,000 trans-port vehicles, billions of rounds of ammunition, and many other items. Furthermore, specialized training courses have been conducted for officers and technicians from 32 countries.

Expenditures for military assistance in the fiscal year 1956 are estimated at 3.1 billion dollars as compared with 3.6 billion dollars in the fiscal year 1954, and an estimated 2.7 billion dollars in 1955. The decline in estimated expenditures from 1954 to 1955, and the subsequent increase projected for 1956, do not accurately reflect the probable rates of delivery of equipment to our allies during 1956. Actual deliveries are expected to continue in the fiscal years 1955 and 1956 at around the 3-billion dollar level which was attained in the fiscal year 1954. The fluctuations in expenditure estimates are due to a change in the method of financing wherein the Department of Defense finances the production of common type materiel, pending delivery to the mutual security program and subsequent reimbursement of Department of Defense appropriations.

Much of our mutual military assistance continues to strengthen our allies in the North Atlantic Treaty Organization, and I hope that we may soon begin furnishing certain items of military equipment which will be needed by the new German forces. To the extent that this materiel cannot be financed by the Federal Republic of Germany from its own resources, it will be financed from appropriations made for the mutual security program. The continuing growth of economic strength in Europe and completion of the financing of much of the capital equipment which was required for the initial rapid military buildup will make it possible to reduce military assistance for this area in the immediate future below the level of the last few

The military assistance program proposed for the fiscal year 1956 will include aid to Korea which, in previous years, was financed from regular Department of Defense appropriations. We are also proposing the continuation of assistance designed to strengthen further the defenses of Formosa, Japan, and certain other countries in Asia which are. presently receiving military assistance.

Expenditures in the fiscal year 1956 will be largely from appropriations made in previous years. At the same time, however, new authority of 1.4 billion dollars, which I am recommending, is needed to incur obligations in the fiscal year 1956 to finance in advance certain new requirements such as the Korean program.

Direct forces support: The present Mutual Security Act distinguishes between military equipment and those supporting items which are necessary to make the soldiers and weapons effective. These supporting items, commonly referred to as direct forces support, include gasoline, tires, uniforms, medicines, rations, and similar items which all military forces consume every day.

For the fiscal year 1956 I propose that direct forces support be provided to only a few selected countries. These counour mutual security requires the notice forces larger tries, primarily in Asia, are ones when tenance of active forces larger those which these countries could a port from their own resources. In fiscal year 1956 direct forces support the armed forces of the Republic of K rea, which was formerly provided for the Department of Defense budget, w be covered for the first time by, mutual security program.

Direct forces support will conting be a significant part of the mutual curity program for so long as the accurity of the free world requires that large military forces be maintained in Asia and the Near East. I recommend 630 million dollars of new obligational authority under proposed legislation for this purpose. Expenditures for this program from existing appropriations and from the proposed legislation are estimated at 600 million dollars in the fiscal year 1007 as compared with 550 million collars in the fiscal year 1955.

INTERNATIONAL AFFAIRS AND FINANCE

During the past year the free world, despite some setbacks, has made heartening progress in building the strength and unity which are so important to our security. In this hemisphere, in Europe, Asia, and Africa, the free nations acted together to strengthen their defenses against international communism, to widen economic cooperation, and to settle long standing disputes which have undermined free world unity. In these developments the United States has played a vital role.

My program for the coming year is designed to consolidate these gains and to make further progress. Particular emphasis will be laid on further strengthening the foreign service organization of the Department of State which carries the burden of foreign policy leadership and negotiations. We are likewise placing emphasis on revision of our several international programs to 1955

tion stocks of key military items to greater levels than ever before accumulated except in time of war. My recommendations in this budget will permit us to continue the accumulation of reserves of selected types of materiel. They also provide for our operating needs for newer weapons and equipment. As has been the policy of this administration in the past, maximum feasible reliance will also be placed upon keeping military production facilities in operation rather than on accumulating even larger reserve

stocks of end-items. Military construction expenditures during the fiscal year 1956 are expected to increase substantially over the 1955 level, reflecting progress in all Services on construction of bases. A substantial portion of the military public works projects proposed to be undertaken during the fiscal year 1956 are related to the continental defense program. In addition, this budget provides for essential increments to overseas construction programs now hearing completion and for rounding out the facilities needed for the approved military force levels. The program includes a portion of the family housing greatly needed at military installations. Limited provision is also made for replacing a small portion of hatandard World War II construction

wh has passed the point of economical

mitenance and operation.

In my special message I recommended rently needed legislation to create a ore effective military reserve. Expendures for the reserve components are kpected to increase markedly during ne fiscal year 1956 as a result of this egistation. Reservists in drill pay status are estimated to increase from 697,000 as of June 30, 1954, to about 857,000 at end of the current fiscal year and a little over 1,000,000 at the end of the fiscal year 1956. In addition, under the terms of the proposed new program, there will be approximately 50,000 reservists in drill pay status who will have completed 6 months' active duty training by the end of the fiscal year 1956.

This budget also provides for continuation of the present high level of research and development in the Department of Defense. Major emphasis is being placed on developments which will more effectively utilize nuclear energy in military operations. New equipment and techniques are being developed to provide the mobility needed to meet the changed requirements of nuclear warfare. We shall continue to concentrate on those programs which show the greatest promise of providing reliable new weapons and significant improvements in both our offensive and defensive capabilities under the conditions of modern warfare. It is my belief that increased returns in military research and development can best come from maintaining a stable high level program. Although this level of program utilizes, either through direct employment or on a contractual basis, about one-half the research scientists and engineers in the United States, it also permits a high level of nonmilitary research and development essential toan expanding economy.

Civil defense: Civil defense is also an integral part of the overall program for defense of the continental United States against enemy attack. Although the major part of continental defense is in the military budget, expenditures by the Federal Civil Defense Administration are classified in the commerce and man-power section together with those for dealing with peacetime disasters.

The concept of civil defense adopted last year takes account of the destructive Mreat of modern weapons and places emphasis on improved warning of impending attack, to allow time for evacuation of potential target cities. Since this policy was announced, the Federal Civil Defense Administration has developed its plans more fully and individual cities have tested mass evacuation. I cannot stress too much that civil defense will succeed or fail in proportion to the willingness of American communities to meet the peril. The Federal Government is developing cooperative methods with State governors, mayors, and voluntary citizen groups, as well as among Federal agencies, in building the civil defense organization. In accordance with the Federal Civil Defense Act of 1950, the primary responsibility for civil defense rests with the States and their political subdivisions.

Development and control of atomic energy: It is our purpose, working in concert with other nations, to banish the threat of atomic warfare which now confronts the world. Progress is being made toward establishing an international agency for cooperation in developing the peaceful uses of atomic energy, as I proposed to the United Nations on December 8, 1953. The budget of the Atomic Energy Commission for the fiscal year 1956 provides for greater expenditures than ever before on projects to develop peaceful applications of atomic energy. We shall continue unabated our efforts to assure that this great force will be used, not for war, but for the well-being of all mankind. Until such assurance can be achieved, however, we have no alternative but to strengthen further our most effective deterrent to armed aggression—the power of our nuclear weapons stockpile.

Despite a growing program, I am recommending for 1956 only a slight increase over 1955 in new authority to incur obligations because of the availability of large unobligated balances, due partly to savings in construction costs. Potal expenditures in the fiscal year 1956 are estimated at 2 billion dollars, 50 million dollars less than in 1955.

Operating expenditures will rise in the fiscal year 1956 to the highest rate yet attained. They will increase from 1.2 billion dollars in 1955 to 1.5 billion dollars in 1956 principally because of an expected higher level of procurement of raw uranium ores and concentrates and because of greater production at the Commission's plants as new facilities are completed and placed in operation. The estimates assume continuing reductions in unit production costs.

Capital expenditures in the fiscal year 1956 will drop considerably as the large new production plants authorized in

prior years approach completion. Recommended new construction will include: (1) plant improvements and other facilities to increase the efficiency and capacity of the production complex, (2) certain weapons research facilities, (3) a medical research center, (4) an international training school in reactor technology, and (5) developmental atomic reactor projects.

Tile w poper or . Merica? Reid 323

The national effort to develop industrial atomic power for peacetime uses will go forward with increased vigor. The Atomic Energy Act of 1954 makes possible substantial private activity and investment in the constructive applications of atomic energy. Construction of one large atomic powerplant jointly financed by the Government and industry is already underway. As I stated in my message of February 17, 1954, to the Congress, "It is esseintial that this program so proceed that this new industry will develop self-reliance and self-suffi-ciency." Accordingly, it is expected that industry will finance an increasingly larger share of the total national effort in developing power reactor technology. However, to speed progress in getting the new technology established, the Atomic Energy Commission in 1956 will expand substantially its program to develop industrial power reactors. Construction of several experimental reactors will be started in 1955 and 1956. Of these, one of the most significant is a power breeder, designed to produce more fissionable material than it consumes. Nearly 15 million dollars is included in the budget for this project.

Effective progress in military propulsion reactors will continue. The launching in 1954 of the first atomic submarine, the U.S. S. Nautilus, will be followed by the launching in 1955 of the U.S. S. Sea Wolf, an atomic submarine of different design. In addition, two atomic-powered attack type submarines have been financed by Department of Defense appropriations in the fiscal year 1955. My recommendations for the Department for 1956 include additional submarines of this type. In 1956, development work will proceed on improved types of submarine reactors, and on a reactor to power larger naval vessels. The Atomic Energy Commission and the Department of Defense will expand and accelerate research on atomic-powered aircraft, and will continue development work on small transportable power reactors for military use.

The basic—as distinct from applied research which is fundamental to progress in all aspects of nuclear energy will be pursued energetically and will entail somewhat higher expenditures in 1956, both in the Commission's own laboratories and through support of research in universities and other insti-

I again recommend that the Congress approve legislation to allow the residents of Oak Ridge, Tennessee, and Richland, Washington, to purchase their homes and establish self-government, thus taking the Federal Government out of the business of owning and governing these communities.

ONGRESSIONAL RECORD — HOU...

give appropriate attention to the important trouble spots around the world today.

My budget recommendations for international affairs and finance reflect a coordinated plan for the conduct of foreign affairs, for the expansion of trade and investment, for mutual security economic assistance, and for foreign information. Total net budget expenditures for the fiscal year 1956 are estimated at 1.3 billion dollars, as compared with 1.4 billion dollars for the current year.

<sup>&</sup>lt;sup>1</sup> Appropriation to reimburse the Commodity Credit Corporation for commodity assistance provided in previous years.

Recommended new authority to incur obligations in the fiscal year 1956 amounts to 1.9 billion dollars, 291 million

dollars more than for 1955. Major items of this increase in new obligational authority result from increased emphasis on defense support and development assistance in Asia and reimbursement of the Commodity Credit Corporation for emergency assistance in the form of commodities furnished in previous years.

International investment activities: In my recent special message on foreign economic policy, I made recommendations which will enable us to expand foreign trade and investment. As a further step in providing capital to underdeveloped areas through stimulating private investment, the United States is participating with other members of the International Bank for Reconstruction and Development in working out proposals for an International Finance Corporation. Such a corporation, although it could not purchase stock. could provide venture capital by making special types of loans without government guaranties to private enterprises in less developed countries. This budget includes 35 million dollars as the United States' share of the corporation's capital of 100 million dollars.

Moreover, in keeping with legislation approved last year, the Export-Import Bank estimates an increase in direct loans and guaranties of private loans from 460 million dollars in the fiscal year 1955 to 665 million dollars in 1956. It is expected that a significant part of this increase will consist of guaranties of private loans which are not included in gross budget expenditures. New direct loans are expected to be authorized in the amount of 403 million dollars. The collections on old loans, including lendlease and postwar reconstruction credits in Europe, will exceed disbursements against new direct loans, so that a net receipt of 90 million dollars to the Treasury is estimated in 1956.

Defense support and development assistance: We anticipate that the trade and investment policies outlined above, and the marked advance in economic strength of many foreign countries over the past 2 years, will increasingly enable us to confine direct Government assistance for defense support and economic development abroad generally to two types of situations, both of which are related intimately to our own future security.

In the first place, we will find it necessary for some time to provide defense support to certain countries which have undertaken a military effort beyond the capacity of their own economies to support. This defense support includes consumption goods and capital equipment to support the general economy, as contrasted with direct forces support which provides assistance to the military forces of the country. In the second place, our national interest will require direct assistance to certain less developed countries where a rate of economic progress which would be impossible without such assistance is essential to their becoming and remaining strong and healthy members of the community of free nations capable of resisting Communist penetration and subversion.

Employment, production, and foreign tries, and foreign technicians come to exchange reserves in free European the United States to observe our methods.

countries are generally increasing. Most of these countries can now strengthen their military establishments and at the same time improve their living standards without further United States defense support. In the fiscal year 1955, defense support has been limited to very few countries, and a similar situation is expected to prevail in 1956.

Latin America, an area with which we have well-established trade and investment relations, has a great need for capital for economic development. Nevertheless, if Latin American countries follow a policy of encouraging private investment, domestic and foreign, they should be able to continue to raise the capital needed for further economic growth. In those cases in which private or International Bank resources are not available or not appropriate for financing sound projects, the Export-Import Bank will welcome applications for loans. The new International Finance Corporation, when organized, can also help provide capital. Grants in Latin America have been necessary only in special situations such as in Bolivia and Guatemala.

In Asia, active warfare has only recently ceased and the free countries of this continent continue to face the threat of Communist subversion and external aggression. We therefore have been furnishing and propose to continue to furnish defense support to several countries including Korea, Formosa, Vietnam, Laos, and Cambodia. Some assistance in economic development has been extended to India.

Unless such support is provided, we may expect economic deterioration and dangerous reductions in the military defenses of the free world. Moreover, without such assistance, these countries, most of which border on Russia and Communist China, will not achieve the economic progress which is necessary to meet the threat of Communist subversion. The loss of northern Vietnam makes this support more imperative than ever.

In the Middle East and Africa, we have provided some grant and loan assistance to promote economic development and political stability, and will request funds to continue this type of assistance in the fiscal year 1956. This assistance has gone to Iran, Israel, Lebanon, Jordan, Egypt, and Libya.

My budget proposals for the mutual security program were developed on the assumption that all requirements for that program will be met from appropriations made for that purpose. Therefore if it becomes desirable to utilize foreign currencies accruing from sales of surplus agricultural commodities made under the Agricultural Trade Development and Assistance Act for mutual security purposes, mutual security appropriations will be used to reimburse the Commodity Credit Corporation for currencies so utilized.

Technical cooperation: Over recent years, technical cooperation has become a continuing part of United States policy toward the rest of the world. American experts help the people in foreign countries, and foreign technicians come to the United States to observe our methods.

vious years.

2 Compares with new obligational authority of \$1,268 million in 1954 and \$1,585 million in 1955.

As a result, millions of people are learning how to produce more food, to improve health and educational standards, and to operate modern industries more effectively. Agreements for technical cooperation are in effect in 68 countries and territories in Latin America, Asia, the Near East, and Africa.

In addition to these bilateral efforts, we have contributed to meeting the total cost of the United Nations technical assistance program, for which experts and financial contributions come from many nations. I am proposing new obligational authority to cover the total proposed contributions of the United States to this program for both calendar years 1955 and 1956.

Refugee and other foreign relief: The 1953 Refugee Relief Act provides for the admission of 214,000 people beyond regular immigration quotas before December 31, 1956. Approximately 17,000 visas have been granted to date. Sufficient progress has been made on concluding agreements with other countries, organizing staff abroad, and completing arrangements with voluntary agencies in the United States to justify the expectation that the program can be completed in accordance with the provisions of the act. To accomplish this, I recommend an increase for the Department of State appropriation for the fiscal year 1956, and a supplemental appropriation for

I am also recommending continued United States support of those programs and international agencies through which funds have been made available for relief, rehabilitation, and resettlement of escapees, refugees, and other special groups. These agencies include the Intergovernmental Committee for European Migration, and the United Nations agencies for Palestine refugees, and for emergency aid to children. In addition, this budget makes provision for a small contribution to help the United Nations High Commissioner for Refugees take refugees out of camps and make them part of the local communities.

Foreign information and exchange activities: The United States Information Agency has done a capable job of redirecting its work and is increasingly effective. It is carrying out its mission in 79 countries through local radio, press, films, and information centers. Its worldwide radio broadcasting is increasingly directed to the countries beyond the Iron Curtain. But the Soviet efforts to divide the United States from other nations of the free world by twisting our motives, as well as its efforts to sow fear and distrust, are mounting in tempo in many areas of the world. I believe it is of the highest importance that our program for telling the truth to peoples of other nations be stepped up to meet the needs of our foreign policy.

The Department of State's educational exchange program is primarily directed toward the exchange of educators, newsmen, labor and management officials, students and others who influence the formation of public opinion abroad. The sharing of ideas strengthens the community of interest so vital to our relations with other people. I recommend

that these exchanges be increased, particularly with underdeveloped areas.

Conduct of foreign affairs: A prerequisite to the achievement of all our international affairs and finance programs is dynamic, positive, and dedicated leadership by the Department of State.

This budget recognizes the essentiality of a stronger and better trained career corps of foreign service officers. We should also provide more adequate facilities for carrying out statutory consular functions. Finally, more comprehensive commercial labor, and other economic data are necessary to assist American businessmen to increase their foreign investment and trade.

As a result of the recommendations of the Committee on Government Operations of the House of Representatives and a committee of distinguished citizens, we are starting a series of improvements in the foreign service. The foreign service will be expanded to cover departmental positions; officers will be rotated more regularly between United States and foreign posts; and training will be improved. Appropriations to initiate these reforms are recommended.

Expenditures for veterans' programs are now rising-reversing the decline from the peak in 1947 as World War II veterans completed their readjustment to civilian life. In the fiscal year 1956, the Federal Government will spend an estimated 4.6 billion dollars for a wide variety of aids to veterans, an increase of 9 percent over the actual outlays in 1954 and 5 percent over 1955. This increase will occur notwithstanding the savings made through improved management of the Veterans' Administration, and the long-run outlook under present laws is continued large increases in payments to veterans.

Three main factors account for this outlook. First, World War II, the Korean conflict, and large defense requirements have increased the present and potential veteran population tremendously. Twenty-one million veterans are now in civilian life, 5 times the number before World War II. An additional 3 million men and women now in the Armed Forces have acquired rights to wartime veterans' benefits by serving during the Korean emergency.

Second, the 3 million veterans of World War I are reaching age 65 and are qualifying for pensions in large numbers. A service-incurred disability is not required for these benefits.

Third, benefits for veterans who served during wartime or an emergency have been increased in scope and liberality. Last year, laws were enacted which will add more than 170 million dollars in estimated expenditures for veterans' benefits for the fiscal year 1956, principally for increased pension and compensation payments.

These facts require sober consideration. Our Government has a responsibility to provide generous assistance to those who have special needs arising from service in the Armed Forces, particularly war service. We must make sure that benefits which are provided to veterans and their survivors are timely

and reach those who need them most. At the same time, we must bear in mind that Government policies designed to assist in the maintenance of a prosperous economy and to support social security, health, and other humanitarian programs are all of value to veterans as well as to other people. Since more than two-fifths of all adult males are entitled to veterans' benefits, expenditures for veterans are a budgetary problem of major interest to the whole population.

Our veterans' pension and compensation laws, in particular, are in need of constructive reconsideration. The nonservice-connected pension system dates back to the Revolutionary War, and its principles require reexamination in the light of recent developments, including the nearly universal coverage of the oldage and survivors insurance system. The overall system of statutes and regulations governing eligibility and payment rates for service-connected compensation has not had a fundamental review for many years. It also needs to be reappraised in the light of the great improvement in medical and rehabilitation techniques and the actual economic situation of the many beneficiaries.

I am therefore appointing a Commission on Veterans' Pensions to study the entire structure, scope, and philosophy of our veterans' pension and compensation laws in relation to each other and to other Government programs. This budget includes 300,000 dollars for the continuation of the work of this Commission in the fiscal year 1956.

An especially complex and difficult problem exists in the field of survivor benefits for military personnel and veterans, where 4 different agencies now provide 5 major benefits. This problem has received extensive attention within the executive branch and from the Select Committee on Survivor Benefits of the House of Representatives. I hope that our mutual efforts will result in enactment of adequate and improved programs which will include full coverage for military personnel under our basic old-age and survivors insurance program and will properly relate benefits provided military personnel to those for veterans.

I have recently issued a proclamation terminating accrual of eligibility after January 31, 1955, for various benefits authorized for veterans who served during the Korean conflict. Few of those discharged during the fiscal year 1956 will be materially affected by this action. Studies will be undertaken to determine the need for measures to ease the readjustment to civilian life of men required to enter the Armed Forces for 2 years of service.

Readjustment benefits: The Veterans' Readjustment Assistance Act of 1952 authorizes education and training, loan guaranty, and unemployment compensation benefits for veterans who served during the Korean conflict. Many World War II veterans are still eligible for loan guaranty benefits and some are still completing their education and training under the original "GI bill." In addition, special vocational rehabilitation aid is provided under other laws for veterans
